GLASS LOTUS

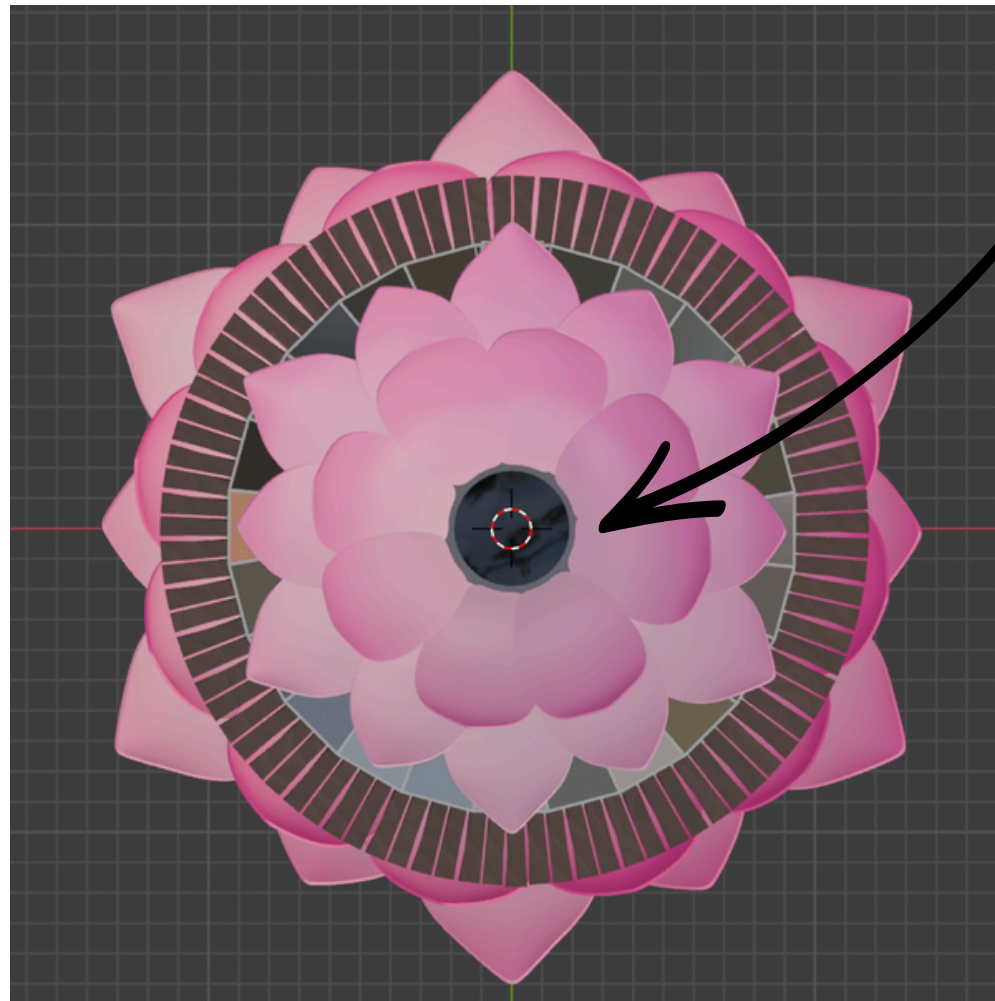

Blender

2026

Personal & Group Project

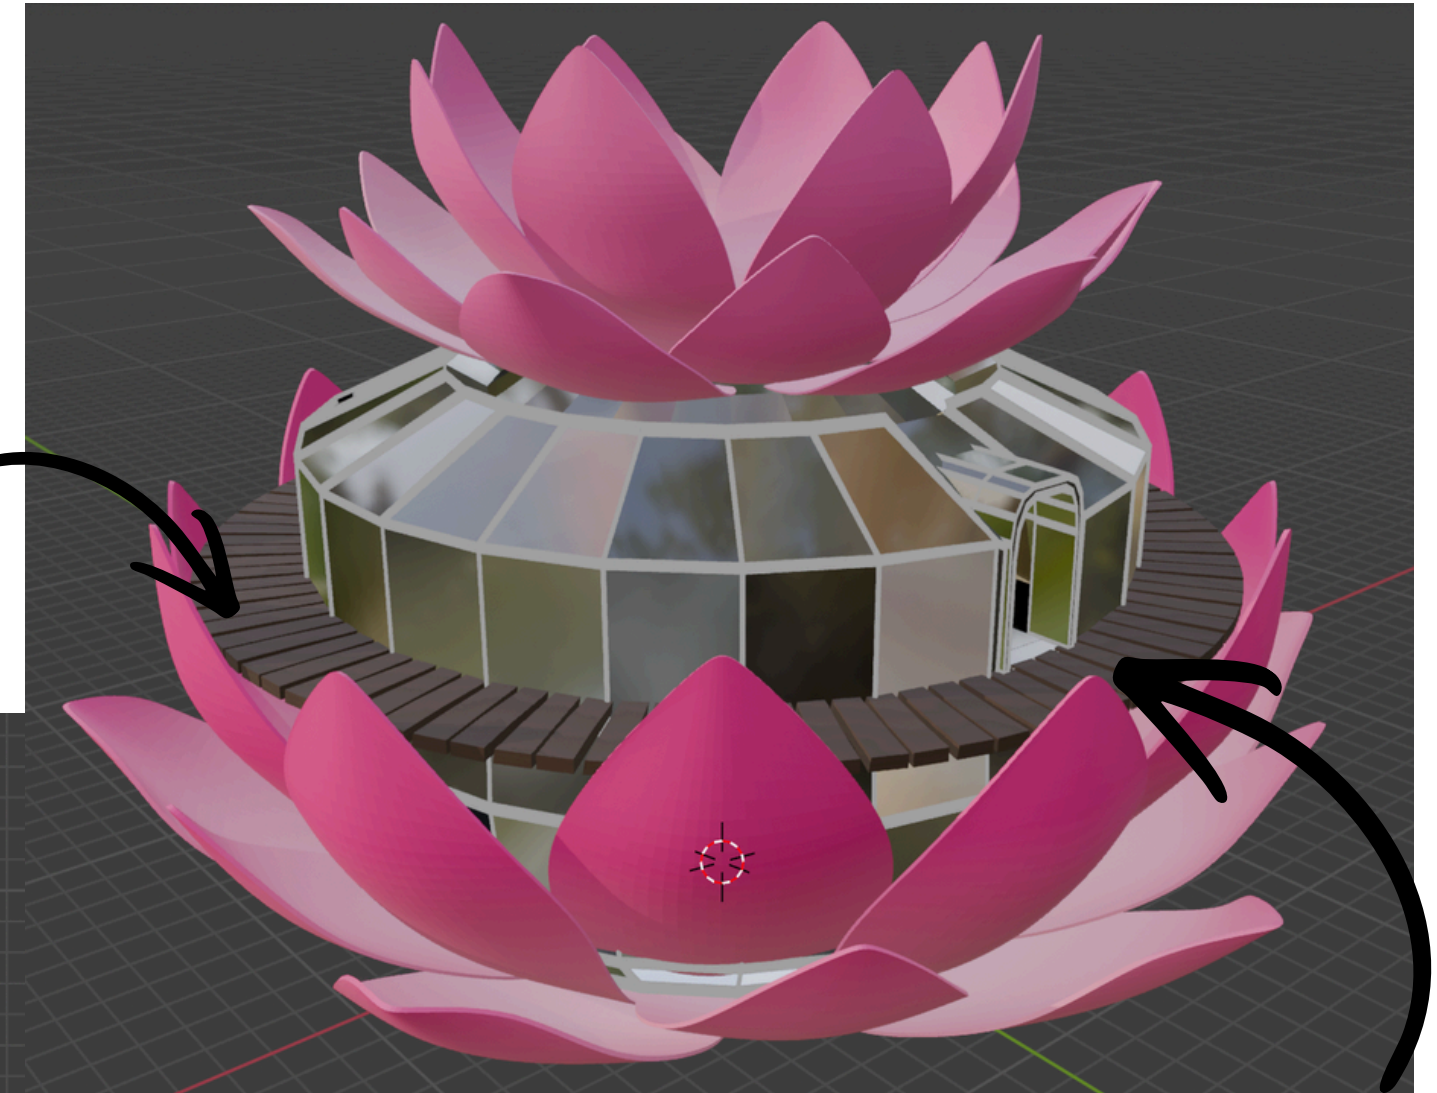

The interior is blindingly bright and disturbingly empty. Because the walls are glass and there is a massive hole (an Oculus) in the ceiling, there are no shadows to hide in. The grandness of the exterior was a lie; inside, there is no furniture, no warmth, just a hollow, echoing chamber of glass and steel. Those inside desperately stretch toward the hole in the roof, reaching for the sky they can see but never touch.

Developed as the central environment for a collaborative VR garden project. I was responsible for the end-to-end design and execution of the space, including the architectural concept, 3D modeling, and final rendering of the pavilion and bridge structures.

BLUE VALENTINE

Pottery

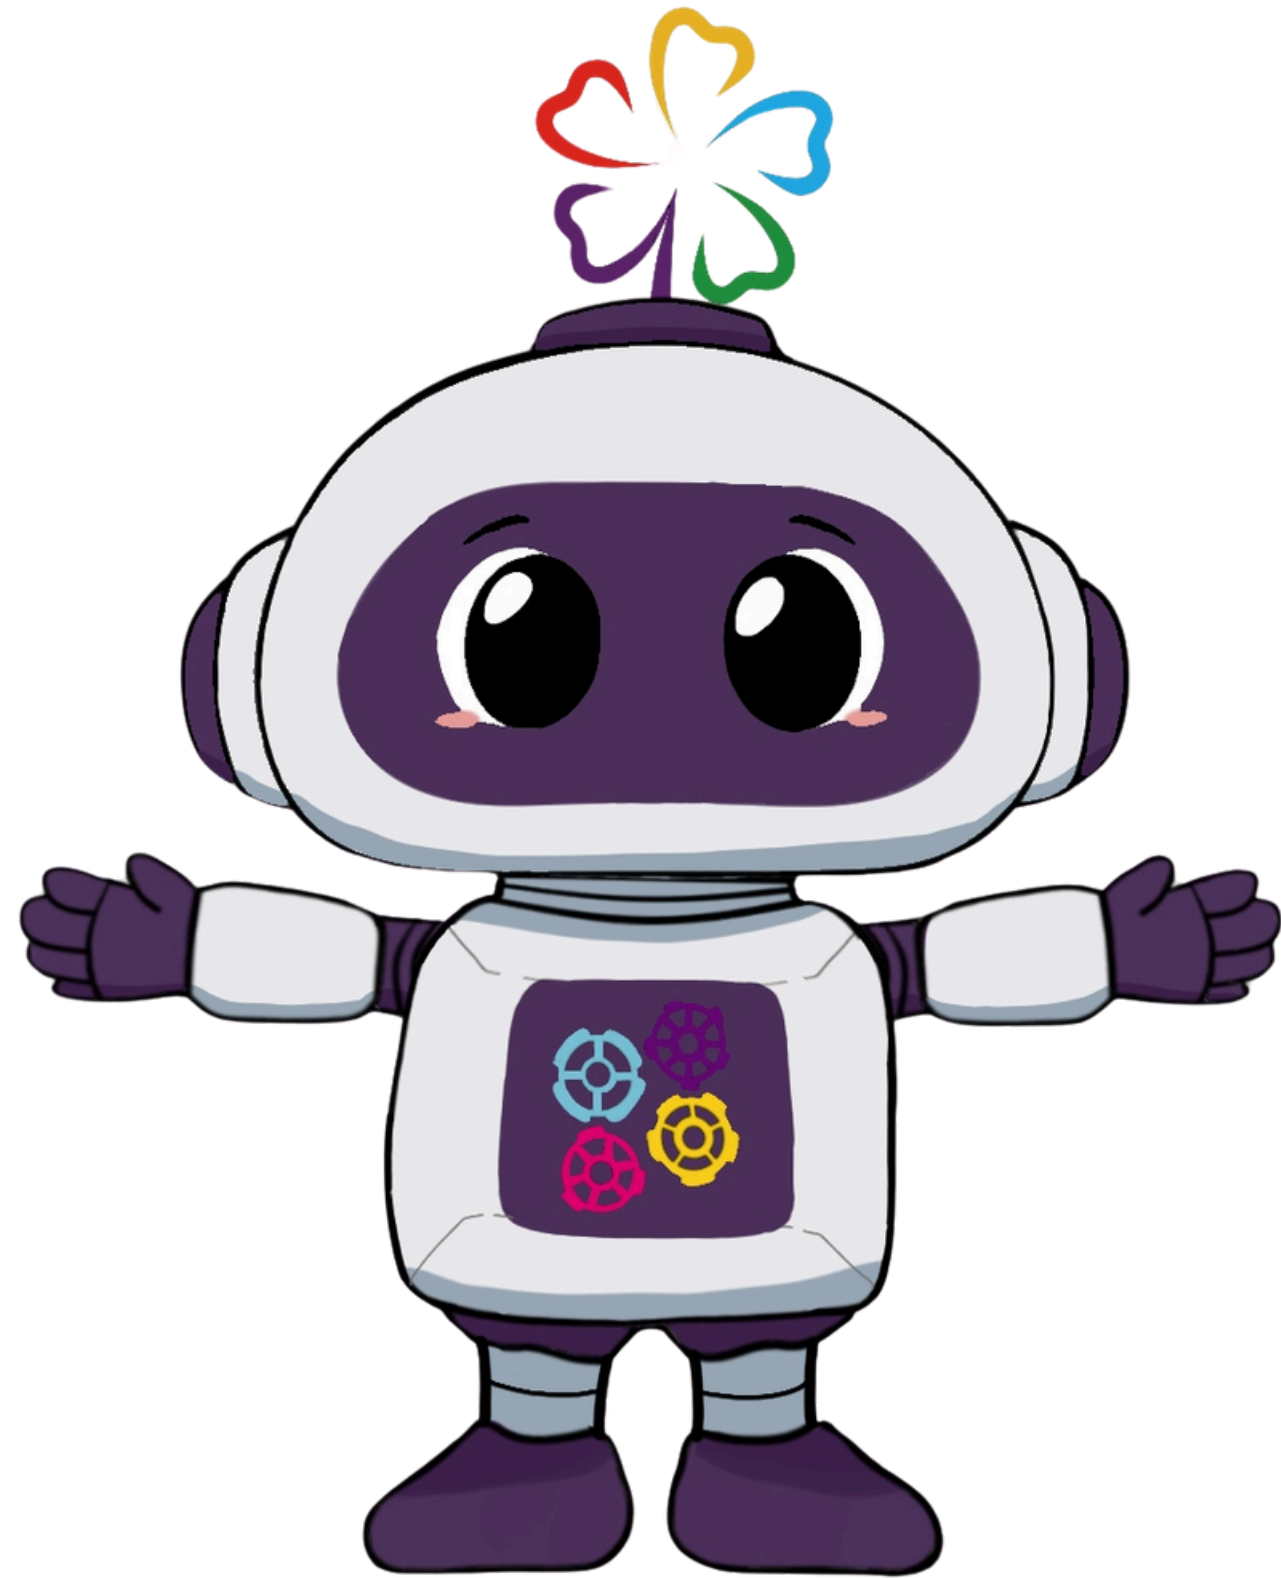

2025

Personal Project

"Our love is like a bruise,
I hope it won't heal, 'cause it's you.
You'll always be my Blue Valentine."

Just as a bruise is a mark left by a touch that stayed too long, this rose holds the pieces of you that are too delicate to carry alone.

It's a Blue Valentine for the love that hurts just enough to feel real, a place to rest your most precious things where they can remain, like a bruise, beautiful and unhealing.

ZIJING MASCOT

Digital Art/Design

2025-2026

Group Project (To be released)

I initiated the creative collective for this project, curating a team of talents to bring the mascot to life. My role focused on maintaining a high-speed iterative process, where we successfully navigated multiple rounds of stakeholder revisions to refine the final form. The project ultimately secured first place in the Zijing College Mascot competition by popular vote.
